

# **P** **PROGRIP** **2011** **CATALOG**

La Plastiche Cassano è costantemente alla ricerca di nuove tecnologie per migliorare i propri prodotti partendo dalle caratteristiche di progettazione e lavorazione. Nella rincorsa di tali obiettivi, tutto ciò che è Plastiche Cassano è soggetto a continui miglioramenti. Non allarmatevi quindi, se suggeriamo di non considerare il presente catalogo, come guida infallibile degli standard proposti e nemmeno di interpretarlo come punto di vista "perfetto" degli stessi prodotti.

Plastiche Cassano is constantly looking for new technologies to improve their product lines, starting from the design and manufacturing aspects. Following this objective, every part of the manufacturing philosophy of PLASTICHE CASSANO is subject to continued improvements.

CASSANO**  
HANDGRIPS - ITALY

**A LOVE FOR THE TWO WHEELS.  
EVOLVING EVERY DAY.  
LET US PRODUCE THE BEST FOR YOU**

*Ci sono motivi  
a noi peraltro sconosciuti,  
che spingono certi uomini  
a guardare un pò più in là:  
oltre le nuvole,  
oltre gli scogli,  
oltre i segreti.*

*Nella loro testa,  
da sempre e comunque,  
si culla un obbiettivo  
o un sogno che dir si voglia,  
e sanno perfettamente  
che prima o poi si avvererà  
o che lo centreranno,  
raggiungendolo.*

*There are reasons,  
that are unknown to us,  
that push certain people  
to look beyond.  
Beyond the clouds,  
beyond the cliffs,  
beyond their secret goals.*

*Their objective  
is forever present  
and they know very well  
that they will  
reach this goal.*

*Sooner or later.*

*Firm on the inside, Gel Density towards the palm of your hand and Medium density on the ends.*

Riders are always looking for **SOFT GRIPS** that don't slip on the bar. The rule in grip design is that the softer the material the more the grip will slip against the bar. Plastiche Cassano is the company that first offered duo density grips to the

Motorcycle world and we try to bring new technical solutions to the market as the need arises.

So we decided to design an even stronger inner sleeve to help minimize grip movement, while providing both a soft gel material and a harder material where needed.

## AVAILABLE COLORS

## ***enduro jacket 9011***

A practical Enduro jacket with all the technical racing characteristics, this jacket was put to the test and was worn by **WORLD CHAMPIONS** in 2 categories. The choice of materials in designing this jacket is Cordura – a great technical cloth that combines optimal resistance and wear, water resistance and adequate capacity for “breathability”. To make this one of the best ventilated choices on the market, we added special mesh panels to the under-arm areas and the shoulders. The lining is also completely ventilated. The sleeves are detachable and Velcro straps on the sides of the jackets give that perfect “custom” fit while riding. The three front pockets the small fifth pocket with transparent plastic panel on the right sleeve add to the practical aspects of this jacket design. The “Carry – all” pocket on the back of the jacket add to that Racing look. The new look, the thermoformed panels add to the design that is available in 3 colors: Red Blue Gray.

**BLUE**

**AVAILABLE FROM  
M TO XXL**

# DUO SPORT JACKET 9014

*This EXTREME wear jacket is dominated by its panels in Cordura which make it an extraordinary technical addition to demanding Enduro riders. The hidden air-flow vents guarantee high-level ventilation. The sleeves have a V-strap on the inside of the elbow panel to adjust the fit for flexibility or for a tighter fit in high-wind areas. If needed, the sleeves are detachable and can be stored in the rear "carry-all" storage pocket on the jacket. The jacket comes with a padded winter liner for added comfort in cold weather and the liner is detachable for summer months. The side panels of the jacket have Velcro straps for customizing the fit on the side of the jacket. The four front pockets and the small fifth document pocket with transparent plastic panel on the right sleeve add to the practical aspects of this jacket design. To guarantee maximum comfort, the collar is totally padded along the edge. The Silver - Black look and the thermoformed rubber patches give an elegant and exclusive look to this high-quality technical jacket, which is available in one color for the most demanding cyclists: Titanium/Black*

PACKAGING EXAMPLE

Developed by pro racers for the most tough Off-Road conditions, the new PROGRIP 4010 Glove has additional padding in the palm and on the outside of the thumb, in the areas where you need that "something extra" to guarantee comfort during prolonged and extreme use. All areas of high use are reinforced with evident protective stitching and panels while, for a better fit, the back of the glove and the back of the fingers have cushioned Lycra inserts where the soft rubber PROGRIP logo is attached.

MAUNO HERMUNEN 2010

ITEM  
2011

**TOTAL PROTECTION™** Offroad glove with semi-rigid Kevlar inserts. The new look is only one of the characteristics of the KEVLAR 4012 Glove. The Kevlar inserts add to this atypical look but underline the high PROTECTION quality of these newly designed gloves. These semi-rigid inserts are placed on the knuckles and the joints to provide that extra protection for the areas of the hand that are most at risk.

The **TOTAL PROTECTION** package also includes thermoformed rubber inserts and the reinforcements in the thumb area. The great fit and PROTECTED feeling of this new glove are also defined by the padded elastic panel in the upper palm area.

Available in one color combination: Titanium

# SPINE PROTECTOR 5500

Spine protectors have the function of limiting the transmitted forces in the case of a fall or an impact against an obstacle.

They have a certain amount of flexibility in the arched direction of the protective segments; however, it is important to note that excessive flexing or twisting of the spine protector could cause a loss of the protective capacity of the product, or possibly even breakage.

Claims or returns, that relate to spine protectors that have been improperly used, will therefore not be accepted by the manufacturer. It is suggested that, after any type of traumatic impact, the structural integrity of the spine protector should be checked. The spine protector does not protect against torsion trauma or against extreme movements. The PROGRIP Spine Protector has passed all the necessary requirements of the European Directive 89/686/CEE (and successive modifications) and has passed the Technical Regulations EN1621/2. This product was certified by the Authorized Organization of the EEC.

#### MATERIALS USED:

Base: made of thermoformed polyurethane foam with a density of 30kg/mc; thickness 10mm

Outside Covering: 100 % polyester cloth

Inside Lining: Highly breathable webbed material

Reinforcements: Injections of auto-sealing, expansive polyurethane foam

Lombard Elastic Bands: components: polyester, polyamide, elastomeres  
Shoulder Band: for the regulation of fit and comfort: 80% Elastic with polyamide

#### CLEANING:

The PROGRIP spine protectors should not undergo cleaning or other treatments that alter the physical properties of the components of the product.

#### WARNING: NO PROTECTIVE GEAR CAN OFFER COMPLETE PROTECTION

It is limited to the transmitted forces in the case of a fall or an impact against an obstacle. The spine protector is flexible in the direction of the curved elements forward and backward, because excessive rigidity could generate the transmission of the forces outside of the protected areas and, in particular, onto the neck.

The spine protector does not protect against risks of external torsion or movement.

#### PERFORMANCE:

As indicated on the labels, the PROGRIP spine protector passes the requirements of energy absorption defined in the Regulation EN1621/2

From the examinations of EEC certification, it was ascertained that the average absorption rate during the tests, satisfies the requisites of the Regulation that are proposed to define the best level of protection considering the requirements of comfort and ergonomic fit.

#### LABELLING:

CE: The CE label that is applied on every single PROGRIP spine protector is proof of the conformity to all of the required features that are obligations of the manufacture with relation to the product, to the sense of the existing laws and regulations. The CE label attests, moreover, that whoever has labeled this product verifies that it conforms to ALL THE EUROPEAN COMMUNITY REQUIREMENTS that are applicable to spine protectors and that the PROGRIP spine protectors have undergone EEC Certification.

FOAM PROTECTION**

This hard-shell chest protector for OFF-ROAD use is the result of our in-house R&D department working with demanding Off-Road Professional riders. It's made of impact resistant polycarbonate and provides a high level of comfort and protection. The front panel is connected to the rear shell with comfortable articulated joints. The placement of internal padding where the chest protector comes in contact with the body also add to the overall comfort of this design. The racing look and design of this winning chest protector are available in 2 colors: transparent clear and transparent red.

**SPECIAL ORANGE**

ITEM  
2011

For their structural simplicity, these pants gave many professional kids riders what they were looking for and were even the product of choice for the future's champions. The front and back elastic knee panels provide optimal and flexible comfort. The Kevlar on the inside knee panels give that extra support in the areas where its needed most.

**SIZES from 20 to 28**

SIMONE ROSSI  
WILLY MX TEAM  
2010

Developed by pro racers for the most tough Off-Road conditions, the new PROGRIP 4009 Glove has additional padding in the palm and on the outside of the thumb, in the areas where you need that "something extra" to guarantee comfort during prolonged and extreme use. All areas of high use are reinforced with evident protective stitching and panels while, for a better fit, the back of the glove and the back of the fingers have cushioned Lycra inserts where the soft rubber PROGRIP logo is attached.

# Light sensitive

Photochromatic Xelox L is a solar filter with a high speed of reaction: Activation time about 4 seconds, fading time about 4 seconds. This product is in a compliance with specifications EN 166, EN 174 and EN 1836. According to EN 1836 such filters comply to point 4.1.3.1, which fixes the category for

photochromatic filters based on luminous transmittance at faded state  $\pi_0$  and luminous transmittance at darkened state  $\pi_1$ . For photochromatic filters the ratio between  $\pi_0$  and  $\pi_1$  must be  $\geq 1,25$ .

## **POLARIZED LENS 3244**

### **NO FOG**

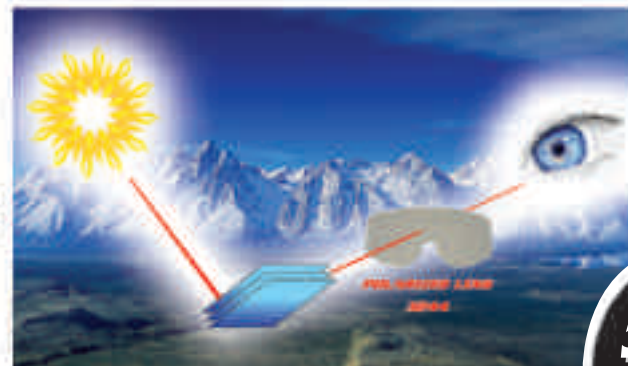

**Suggested use:**  
The 3450 is a neutral color without any chromatic changes.  
The level of transparency makes the lens appropriate for sun screen change.

### **Working principle:**

Natural light waves oscillate in all directions and is, in fact, called diffused light. When light meets a reflective surface (water, snow, sand, etc.) it is polarized, or organized in parallel planes. It is this concentration that irritates the reflection and therefore the glare. The polarizing filter is oriented perpendicular to this plane in such a way that it absorbs the rays and eliminates the disturbing glare.

Under certain conditions, the glare that is created by reflective surfaces (water, snow, sand, etc.) is such that eyesight is greatly limited and eye fatigue is increased.

# OUR HISTORY

# 1961 - 2011

The customer is the real employer of Plastiche Cassano staff. To give the customer the maximum satisfaction of service and quality, it is necessary that we all in Plastiche Cassano commit ourselves in full, with honesty and rigorous control during all phases of production in order to obtain the best of quality. There is not much difference between working well or working badly, but in the long term unsatisfactory results can be very damaging for us all.

## FEATURES OF THE PLASTICHE CASSANO COMPANY

- 1 - OVER FORTY YEARS OF EXPERIENCE
- 2 - TOP QUALITY RAW MATERIALS FROM HIGHLY REPUTABLE SUPPLIERS
- 3 - QUALITY CONTROL IN ALL PHASES OF PRODUCTION
- 4 - THOROUGH CHECK FOR PRODUCTS
- 5 - WORLD CHAMPIONSHIP RACES FOR PRODUCTS TESTING
- 6 - INSURANCE COVERAGE OF ALL PRODUCTS

PRODUCT QUALITY CONSCIOUSNESS OF THE PLASTICHE CASSANO AS PER EN-28 00  
How we obtain the high standard of quality of our products:

### 1 - OVER FORTY YEARS OF EXPERIENCE

Mainly we have achieved our current market position through long experience. We started to manufacture our products in 1960, in the old factory of via Roma n. 13. In the same year we became members of the Chamber of Commerce with number 84565. However the owners of Plastiche Cassano, Mr. Francesco Asnagli had founded the original company in 1925 that was situated in Cassano Magnago, via Mazzini, 42. At that time, Plastiche Cassano was specialized in the production of handlebar grips made with buffalo horns. Immediately after World War II, the first handlebar grips in plastic, bakelite and acetate were produced. (Please see the photographs showing the old factory in 1940). In those days the production capacity was of about 1,000 pairs of grips per day. Nowadays we produce over 200,000 pairs of grips per day. 70% of our products are exported worldwide.

### 2 - QUALITY RAW MATERIALS FROM HIGHLY REPUTABLE SUPPLIERS

It is vital for us to use raw materials of top quality, bought from highly reputable suppliers, with consistency of top quality. The raw materials comply with the European safety regulations Standard EN71 (non toxic materials). The Plastiche Cassano Company executes rigorous quality control over the raw material both in house, and at specialized laboratories that issue certificates of quality. Most of our competitors stock the raw materials in the open. We don't. We only stock raw materials indoors in order to prevent deterioration caused by atmospheric conditions.

### 3 - QUALITY CONTROL IN ALL PHASES OF PRODUCTION

The production process is established by firm written rules, and circulated to all our staff. From the tool making department to the final goods departments, everything is properly planned and controlled.

### 4 - THOROUGH CHECK FOR PRODUCTS

The quality control of the produced pieces takes place twice: the first check is made during the production phase, when each operator has the necessary time and the obligation of controlling every single piece produced. At every 100 pieces, our workers have to check the aesthetical and dimensional features with specialized instruments. The second quality control takes place before packing the products, when a worker performs a further control of dimensions and finishing of 3 pieces for every single carton. In total a check varying from 100 to 200 pieces according to the different model of grips. The products are boxed in strong cartons of small or medium sizes in order to offer easy handling, and adequate protection during the transport.

### 5 - TEST DURING RACES

For the last 20 years we have submitted our products marketed under the trademark IPRO Grip, for race testing at events up to world championship level in three fields. From these experienced champions we gather useful information for ever improving the quality of our production.

### 6 - INSURANCE COVERAGE

All products suppliers are covered by insurance for a maximum liability of eight hundred thousand euro (about 800,000 \$) for any possible damage, accident or death that should be attributed to our products.

The whole process is accompanied by the responsible attitude of all cooperators of the Plastiche Cassano company, from the proprietors to the last employee. This sound attitude allows us to offer a high quality product at a reasonable price and to proudly include among our customers the most important and famous companies in the world of two wheeled transport, general industry, hospital and agriculture.

## 2011

Nowadays we produce with advanced technologies over 100,000 pairs of grips per day
